

Before you get started, you will need:

Cameras / Accessories

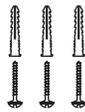

Wired IP Camera(s)

60 ft. Ethernet Cable
(1 per Camera)

Waterproof Cable Cover
(1 per camera)

Mounting Hardware
(Varies by Model)

Items Not Included

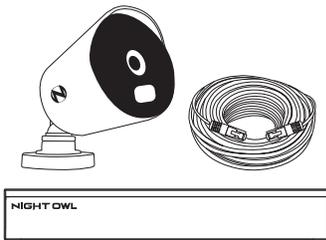

Power Drill

Recorder
(DVR/NVR)

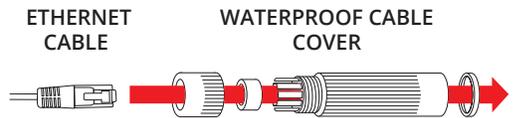

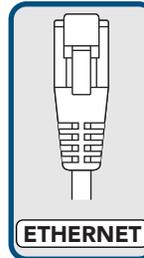

DISCLAIMER: The exact components of your product, images and quantities may vary depending on your model number. While these may vary, this QSG addresses the setup of your wired IP camera to a recorder (DVR/NVR). While we make every effort to provide accurate information, inaccuracies or errors may occur. We reserve the right to make changes, corrections, and/or improvements to the information and to the products, at any time without notice.

Connecting Your Camera

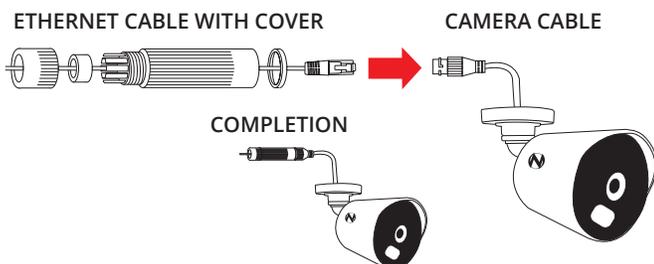

STOP: BEFORE installing, test each camera locally to confirm they function properly.

1: Optional Step

Insert one end of the Ethernet cable into the cable cover as shown in the image above.

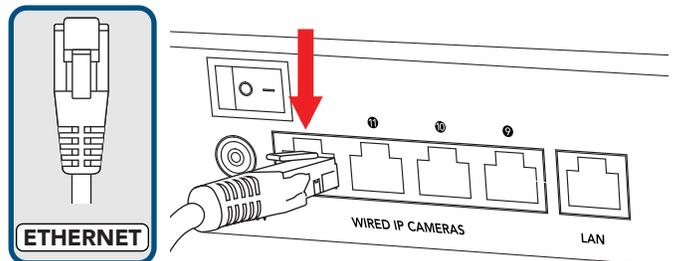

2

Connect the covered end of the Ethernet cable to the camera's power cable.

NOTE: Make sure Ethernet cable is securely connected.

3

Insert the other end of the Ethernet cable into an open Ethernet port on the back of the recorder.

Camera Installation

1

Using the holes in the camera's mounting bracket, mark your screw positions on the surface where you plan to mount the camera.

NOTE: We strongly recommend the camera be mounted at least 7 ft. above the ground.

2

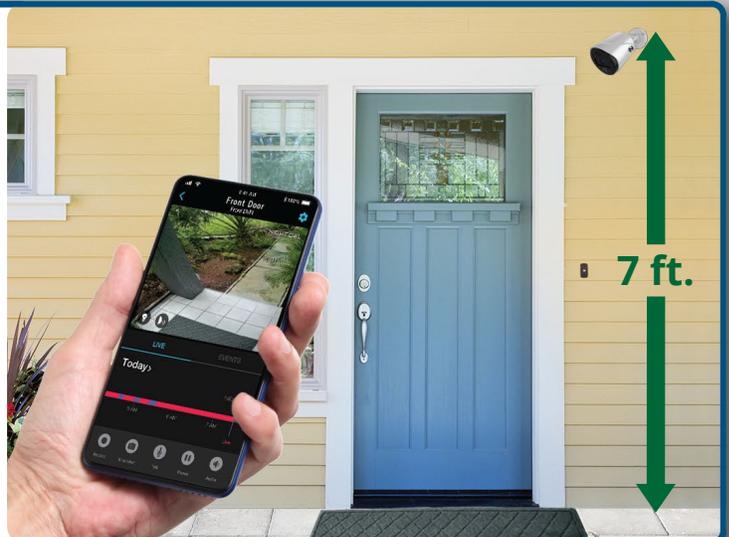

Using a drill bit slightly smaller than the included screw anchors, drill into the mounting surface using the guide marks. Insert the screw anchors. Line up the camera base holes with the screw anchors. Holding the mounting bracket in place, insert the screws and tighten until secure.

★ If your Ethernet cable is not being run through a wall / ceiling, use the cut out on the mounting bracket.

3

With the camera now installed at least 7 ft. above the ground, angle it slightly down. If your recorder is connected to the Internet, you can use our free app to easily find the perfect viewing angle.
